

Predicting which country to choose for residence

Introduction

Every year, there are many people happen to change their residency around the world due to Client's work location. One such family of Indian origin got an offer to choose either Chicago, USA or Toronto, CA as their new work location. Both Chicago and Toronto has accountable number of Indian population. A city with more Indian stuffs will be preferred over other. Therefore, it is important to predict accurately whether Chicago or Toronto has more Indian culture around.

Problem

Data that might contribute to determine which location to choose include indian groceries, food, temple, school, commute. Now we are going to predict which location is better for an Indian family to live.
